WORK EXPERIENCE

Project Engineer

Wipro Limited

07/2018 - 07/2019

Pune

Task

- To automate the test scripts of HONDA car infotainment systems with the help of MOCCA interface which combines most of the current automotive field buses .

PROJECTS

FULL STACK DEVELOPMENT - NOCODESITE (6 Month)

- It was a Java (J2EE) based website which helped users to generate their own website view without any knowledge of coding, Just by an effortless selection of templates and themes . Adding on, the additional feature of the website include Dynamic addition of new pages .
- Technology used : JSP, MYSQL , BOOTSTRAP ,JQUERY, JAVASCRIPT ,CSS, HTML .

DEVOPS TOOLS TO AUTOMATE ALL TASKS FROM BUILD TO DEPLOY STAGE (4 Month)

- Objective : To Automate the work from development team to operation team using DEVOPS tool . In this project we made a website for beach resort booking and applied continuous integration , testing , development and deployment with just one commit(change) on our source code we can deploy our new version of project on server .
- Technology used : GIT,MAVEN, JUNIT, JENKINS, DOCKER .

DATA SCIENCE - Customer Loyalty Prediction (4 Month)

- Objective : To predict loyalty score of customers of Elo (Bank) which has data of merchants and customers. It also has all the transaction details of customers from all the merchants available in and around the country. Loyalty score was then used to figure out which customer is trust worthy to be given a higher loyalty score based on his previous transactions.
- Technology used : Machine Learning Algorithms , Python .

CERTIFICATES
